SYSTEM

*A first-rate
performance beyond
compare*

The Egro TWO Top-Milk XP NMS has been especially designed to satisfy the requirements of those venues having to handle a high daily output of coffee and milk-based beverages. Whether large catering chains, famous fast-food restaurants, convenience store giants or large-scale service areas, the TWO machine provides the ideal solution for offering a consistent and all-round in-cup quality.

24h recommended daily output*
400 cups

1h maximum hourly output

500 espressos
360 caffè lungo
500 cappuccinos
300 latte macchiato

A PRACTICAL AND EFFICIENT MILK SYSTEM. The Egro TWO Top-Milk XP NMS offers customers the possibility to choose from a vast range of milk solutions, specially studied to satisfy the multitude of commercial formats operating in the Ho.Re. Ca sales channel. Now regulated by means of appropriate software, the temperature and consistency of milk-based beverages are variables that may easily be configured and modified by a technician. The new dispensing spout, consisting of a single component that is easy to remove and take apart into two pieces, ensures perfect hygiene. The patented MLR (Milk Line Rinsing) system makes it possible to effect and to set a rapid rinsing phase with the aid of cold water and air, which safeguards the environment and reduces electricity consumption. The quick and simple daily washing cycle has been automated to such an extent that the barista just has to add the detergent.

ONE SINGLE ULTRA MODERN FRIDGE.

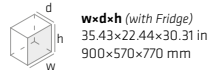

Egro TWO Top-Milk XP NMS has an innovative fridge equipped with a convenient external display, which is supplied as a standard feature, allowing for the simultaneous management of two coffee and milk outlets. The new Fridge, whose storage capacity is equivalent to 6.5 litres, is supplied with a capacitive sensor to accurately monitor the milk level in the tank. With the Multi-Milk Selection add-on, the user may operate with two different kinds of milk to satisfy the most demanding palates. All configurations offered with the ONE Top-Milk XP NMS version allow for the refrigeration unit to be positioned under the counter, if so desired.

USER INTERFACE.

The Egro TWO Top-Milk XP NMS is available in two versions: either with a TOUCH screen, allowing for up to 48 different products to be configured for each of the two coffee and milk outlets, or with a traditional KEYPAD consisting of 10 keys for the selection of 5, 9 or 16 different beverages. A technical menu allows for the management of machine settings and various additional functions such as beverage dosing, personalized products, automatic cleaning cycles, consumption monitoring and counting of dispensed beverages.

POWDER MODULE.

The Powder Module allows for the management of a great number of beverages in powder form. It is an external device positioned on the right hand side of the machine and consists of two hoppers that may either be used with one powder or may operate separately with different aromatized, spiced, caramelized, chocolate-based and milk powders. An alternative high-performing solution that is well suited to all those venues wishing to offer their customers an increasingly varied and exhaustive choice of beverages.

DURA-BREW.

The international spirit of Egro TWO Top-Milk XP NMS is underscored by the enhanced brewing group in stainless steel 18 grams, created for the specific purpose of enabling the preparation of coffee beverages in perfect American and North European style. The brewing unit boasts a revolutionary patented hermetic closing system, which requires less maintenance and reduces the overall running costs of the machine.
